Description of Proposed Project

Harris Galveston Subsidence District Regulations to convert users from groundwater to surface or alternate water is increasing treated water demands. The CoH is among the largest providers of surface water to customers in Region H. COH currently treats water originating in the Lakes Houston and Livingston in three treatment plants prior to distribution to its customers. The three plants are the Northeast Water Purification Plant (NEWPP), the East water Purification Plant (EWPP), and the Southeast Water Purification Plant (SEWPP). Over the course of RWP planning period, increasing CoH and customer demands as well as Harris Galveston Subsidence District Requirements will drive the need for additional surface water treatment. This NEWPP expansion will accommodate Houston customers including four regional Water Authority demand. The expanded plant will be built in four 80 MGD modules for a total potable water capacity of 320 MGD.

This project is listed in the TWDB Water Plan under the COH. The Design Build project is being developed by the CoH but will serve WHCRWA as well as other water Authorities. WHCRWA is funding their pro-rata share of the project which is approximately 25% based on water demand allocation of the overall project. The overall project costs have increased approximately \$200M since the original loan application as a result of design development, pilot testing results and treatment refinements. Design refinements at the new facility attempt to address the ongoing treatment challenges that persist at the existing plant. WHCRWA is requesting additional funds to cover their portion of these increased costs.

Emergency (select all that apply) Agricultural Efficiency Project?				 □ Applicant/entity's water supply will last less than 180 days. □ Water supply need occurs earlier than anticipated in the State Water Plan. □ Applicant has received or applied for Federal emergency funding. ☑ None of the above. □ Efficiency improvement achieved by implementing the project (Please provide an attachment showing the basis for your calculation.) □ Yes □ 1%-1.9% □ 14%-17.9% 					
			⊠ No	□ 2%-5.9% □ ≥18% □ 6%-9.9%					
Household Cost Factor (Household Cost Factor for SWIFT prioritization is calculated by dividing the service area's average residential water bill by its annual median household income. For regional projects, these should represent the combined service areas of all participating entities.)									
Estimated average annual residential water bill: for WHCRWA \$42			5.04 Annual Median Household Income:			\$52,533 Harris County
