RECORDS OF WATER LEVELS IN BASTROP AND
CALDWELL COUNTIES, TEXAS

1937 through December 1956

Compiled by

B. W. Swartz, Engineering Aide

April 1957

INTRODUCTION

One of the functions of the Texas Board of Water Engineers is to make, independently or in cooperation with other state and federal agencies, investigations of the source, amount, and quality of ground-water supplies. Periodic measurements of water levels are made in the principal ground-water reservoirs of the State to evaluate effects of ground water development in relation to the available supply. This work is done through an observation well program financed cooperatively by the United States Geological Survey and the Texas Board of Water Engineers.

This bulletin contains measurements of the depth to water in feet below land-surface datum in 18 wells in Bastrop County and 28 wells in Caldwell County. It is one of a series of publications by the Texas Board of Water Engineers which contains measurements of the water levels in selected observation wells made as a part of the cooperative program of ground-water investigations throughout the State. The records cover the period from 1937 through November 1956 in Bastrop County. No measurements were made in 1943-44 or 1947-49. In Caldwell County the records cover the period from 1944 through December 1956; no measurements were made in 1945 or 1948-51.

An inventory of wells in Bastrop County was made intermittently from 1946 to 1953 as part of the cooperative program. The results of this investigation were published by the Texas Board of Water Engineers in Bulletin 5413.

During the period 1943 to 1946 an investigation was made in Caldwell County; the results were published by the Texas Board of Water Engineers in 1947. The water-level measurements made at that time are included in this report.

Water levels are reported in feet below land-surface datum. The accompanying maps show the locations of the observation wells. The well numbers on the map correspond to those in the table of measurements. Hydrographs showing the fluctuation of the water levels in selected wells and the annual precipitation at the Weather Bureau stations at Smithville and Luling are given on pages 10 and 22. Records of water wells, geologic data and discussion of ground-water conditions may be found in the publications listed in the bibliography.
