STERLING COUNTY, TEXAS

By

W. O. George and J. C. Dalgarn

This publication contains records of 437 wells and springs, drillers' logs of 12 wells, logs of 76 test holes, and the results of chemical analyses of water from 234 wells and springs in Sterling County, Texas. The records were collected from February 16, 1941 to July 15, 1941, by J. C. Dalgarn, Project Supervisor, Project No. 17277 of the Work Projects Administration. This project was sponsored by the Texas State Board of Water Engineers in cooperation with the United States Department of the Interior, Geological Survey.

The analyses were made by chemists employed on Work Projects Administration Project No. 17276 under the direction of Dr. E. P. Schoch, Director of the Bureau of Industrial Chemistry, The University of Texas, and E. W. Lohr and W. W. Hastings, Assistant Chemists of the Quality of Water Division of the Federal Geological Survey. The results of all of the analyses are tabulated in parts per million and thirty of them are also given in milligram equivalents per liter for the convenience of those who prefer this form of expressing the quality of water.

The records serve as a guide to land owners, well drillers and others who need information regarding wells, the depth to ground water in different parts of the county, and the quality and chemical character of water yielded by the wells. They provide useful information for more detailed investigations that are being made by the Texas State Board of Water Engineers in cooperation with the Federal Geological Survey in many parts of Texas.

A limited number of copies of this release are available for free distribution. They may be obtained by addressing a request to Mr. C. S. Clark, Chairman, Texas State Board of Water Engineers, 302 West 15th Street, Austin, Texas.

This release was mimeographed by employees of the Work Projects Administration Project No. 17276.

Records of wells and springs in Sterling County, Texas
All wells were drilled unless otherwise stated in remarks

Well No.	Distance from Sterling City	Owner	Driller	Date completed	Depth of well (ft.)	Diameter of well (in.)	Height of measuring point above ground (ft.)

Partial analyses of water from wells and springs in Sterling County, Texas

Analyzed at The University of Texas under the direction of E. W. Lohr and W. W. Hastings, Chemists, U. S. Department of the Interior, Geological Survey, and Dr. E. P. Schoch, Director of the Bureau of Industrial Chemistry. Results are in parts per million. Well numbers correspond to numbers in table of well records.

Well	Owner	Depth of well (ft.)	Date of collection	Total dissolved solids (sum)	Calcium (Ca)	Magnesium (Mg)	Sodium and Potassium (Na + K) (calc.)	Bicarbonate (HCO ₃)	Sulfate (SO ₄)	Chloride (Cl)	Fluoride (F)	Nitrate (NO ₃)	Total hardness as CaCO ₃ (calc.)

- EXPLANATION —
- WELL WITH HAND PUMP, BUCKET OR BAILER
 - ◇ WELL WITH WINDMILL OR SMALL POWER PUMP
 - ⊗ WELL WITH PUMPING PLANT — 5 HORSE POWER OR LARGER
 - ◇ WELL DRILLED TO TEST FOR OIL OR GAS
 - ◇ UNUSED WELL
 - SPRING
 - TEST WELL DRILLED BY W.P.A. LABOR
