

Key Issue A. Determination of whether plans were developed in accordance to the general provisions for planning included in statute and rules.

The recommended additions are made, as follows:

1. Task 1 Memorandum, Section 1.5, Water Quality and Natural Resources, page 26. Add the following sentence at the end of the first paragraph under Water Quality: “Review of current water quality programs reveals that none of the conditions identified in the *State of Texas Water Quality Inventory* and the *Regional Water Quality Assessments* affect the availability of water in Region H. These programs have been considered in terms of their impact on water supply and result in no reduction in water supply quantities from published information.”
2. Each of the reported yield values provided within Table 4 for Lakes Conroe, Houston, Livingston and Lewis Creek reservoir are based on firm yield hydrologic analysis methods. This fact is stated in the Task 3 Report. Additionally, we will make the following changes:

Task 3 Report, Appendix A, pages A-4 to A-5:

In the section ***Lake Livingston/Wallisville System***, replace the second sentence with the following: “The permitted yield of these reservoirs equals the firm (drought of record reliable) yield.”

In the section ***Lake Houston***, replace the second sentence with the following: “The permitted yield of this reservoir equals the firm (drought of record reliable) yield.”

In the section ***Lake Conroe***, replace the second sentence with the following: “The permitted yield of this reservoir equals the firm (drought of record reliable) yield.”

In the section ***Lewis Creek Reservoir***, replace the second sentence with the following: “The permitted yield of this reservoir equals the firm (drought of record reliable) yield.”

3. Task 3 Report, Add the following text to the end of the paragraph **Groundwater Drought Susceptibility** on pages 8-9:

“Because these triggers are system-specific, their establishment was left to the local water providers. During periods of high water use, increased aquifer draw down is reflected in reduced system pumping capacity. Local water providers see these affects as reduced pressure within a distribution system and/or reduced ability to replenish storage volumes during off-peak usage periods. A typical drought trigger adopted by local water suppliers is the inability to replenish storage to a certain volume for a certain number of consecutive days (such as 80% storage for 3 days). Alternatively, some providers choose to define droughts based on water demands.

Demand-type triggers are defined as a percentage of the total system capacity (such as when demands equal 80% of pumping capacity). Tiered triggers are established to define drought stages. Response actions are established based on the severity of the drought stage. During the mildest drought stage, typical plans call for public notification and requests for voluntary conservation. Medium drought stage response actions typically include mandatory reductions, such as restrictions on landscape irrigation. Severe drought stage response actions typically include additional mandatory reductions, and in some cases call for temporary suspension of deliveries to certain customers.”

4. Task 3 Report, Add the following additional paragraphs to the end of section **Surface Water Drought Susceptibility** on page 10:

“Surface water providers for municipal and/or industrial customers within Region H that are not Major Water Providers, either maintain fully reliable water rights or receive water supplies through contracts with one of the Major Water Providers. Examples of these water suppliers are Chambers-Liberty Counties Navigation District, Baytown Area Water Authority and Brazosport Water Authority. All of these surface water providers maintain drought contingency plans or adhere to the components of the Major Water Provider's drought contingency plan. Those surface water suppliers of non-reliable water supplies essentially consist of mining, livestock, irrigator and agricultural interests. These surface water users do not generally maintain drought contingency plans. During periods of low surface water supplies, these users either revert to short-term contracts with an entity with fully reliable water supplies, obtain groundwater if it is available, or do without water for short time periods. Due to the economics of these industries, specific industry based drought contingency measures should be developed at the state level for those entities susceptible during sustained low water availability periods.”

Key Issue B. Determination of consistency between Regional Water Plans which include water management strategies that rely on water supply sources located outside the region and/or a shared Special Water Resource.

The City of Groveton in Trinity County sits on the boundary between the Neches and Trinity River basins. Although the portion in the Neches basin is technically part of Region I, Groveton requested that it be represented entirely within Region H. The portion of Groveton in the Neches basin was erroneously omitted from the planning tables. The following changes have been made to correct this omission:

Task 2 Report, Appendix A, Tables 1 and 2 have been updated to reflect the population and water demands for the Neches Basin portion of Groveton.

Task 3 Report, Appendix A, Tables 4, 5 and 5A, second entries for Source ID 22822, Aquifer Undifferentiated in Trinity County, and Source ID 08400, Lake Livingston, were added to reflect the ground and surface water supply for the portion of Groveton in the Neches Basin. The East Texas Regional Water Plan was referenced to confirm the availability of groundwater supplies. The Lake Livingston supply for the Trinity Basin portion of Groveton was reduced accordingly.

Task 4 Report, Appendix A, Tables 7 and 7A have been updated to include the supply and demand comparison for the Neches Basin portion of Groveton.

Key Issue C. Determination that all documented interregional conflicts have been resolved.

The firm yield of Lake Livingston was confirmed as requested and that value was provided to the Brazos G Water Planning Group.

Key Issue D. *Determination that no water supply sources have been over allocated, both from an intraregional and an interregional perspective.*

The firm yield of Lake Livingston was confirmed as requested and that value was provided to the Brazos G Water Planning Group.

The entry for water right 12-5322B is incorrect in both the text of the Task 3 report and in Table 5. It appears that there is an over allocation within Table 5 due to an incorrect entry for irrigation supply related to the Chocolate Bayou Water Company. When the correct supply value is used, the over allocation is corrected. The following correction is made:

Task 3 Report, Appendix A, page A-25, section **Irrigation Supplies**. In the first table, replace the values for the entry “CBWC basin 12” with 38,563 ac-ft/yr in each decade. In the paragraph following the table, delete the last two sentences “This amount...” Delete the second table on the page.

Task 3 Report, Appendix A, Tables 5 and 5A: The supply entry for Irrigation in Brazoria County, Source ID 3461205322B, should be revised to 18,382 acre-feet/year in all decades.

Key Issue E. *Determination that consensus environmental planning criteria were used to appropriately provide instream flow and bay and estuary inflow for water management strategies utilizing surface water.*

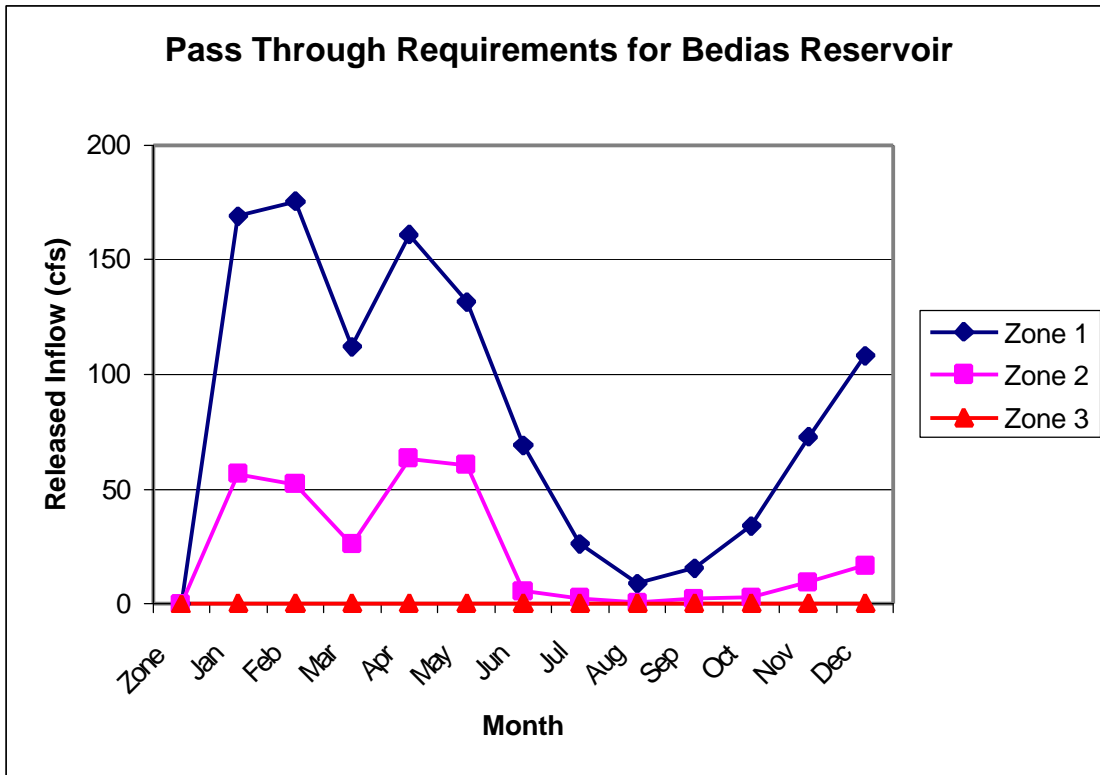

Staff recommendations were addressed as follows:

- 1) The yields of the Allens Creek and Little River reservoir management strategies were determined as a function of meeting the instream flow and bay & estuary flow criteria within the Brazos River basin. No modifications to the yields of these management strategies is necessary.
- 2) The consensus environmental flow requirements were determined for the Bédias Reservoir management strategy and incorporated into the plan as follows:

Task 5 Report, Appendix A, Technical Memorandum: Bédias Reservoir – SJRA Interbasin Transfer, section **Issues and Considerations**, second paragraph. Replace the sentence “The junior water rights...” with the following:
“The junior water rights provision may prevent any negative impact Bédias Reservoir might have on the Livingston-Wallisville system yield. A yield analysis was performed for the Bédias project that incorporates a provision to provide required environmental flow pass-throughs based on the consensus planning environmental flow criteria established for the State Water Plan. Exhibit 2 illustrates the required pass-through criteria that are established as a function of the reservoir water surface elevation throughout the hydrologic period. Exhibit 2 also shows the required environmental pass-through releases from the reservoir during each month. These environmental flow pass-throughs can be met with a Bédias reservoir project yield of 90,700 acre-feet per year.”

Add Exhibit 2 (attached) behind Exhibit 1 in the Technical Memorandum.

Exhibit 2.

Reservoir Zone	Zone 1	Zone 2	Zone 3
Reservoir Storage	> 80% of Capacity	50% to 80% of Capacity	< 50% of Capacity
Pass Through Target (cfs)	Median	25 th Percentile	7Q2
January	168.9	56.5	0.1
February	175.5	52.1	0.1
March	112.0	25.9	0.1
April	160.8	63.4	0.1
May	131.7	60.5	0.1
June	69.2	5.6	0.1
July	26.2	2.4	0.1
August	8.9	0.5	0.1
September	15.6	2.2	0.1
October	34.1	2.8	0.1
November	72.8	9.4	0.1
December	108.1	16.7	0.1

3) Task 5 Report, Appendix A, Technical Memorandum: City of Houston/Trinity River Authority Contract Agreement. The following should be added as a second paragraph within the section entitled, **Issues and Considerations**.

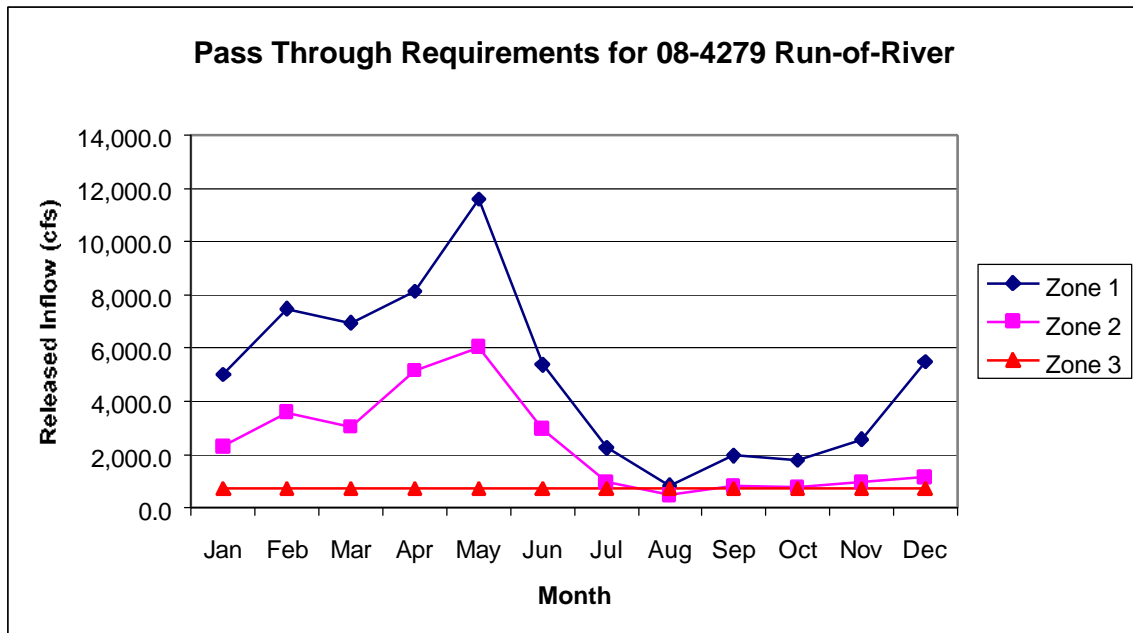

"The City of Houston/Trinity River Authority Contract Agreement water management strategy would occur as a water sales contract between the City of Houston and the Trinity River Authority. The TRA has the ability to sell water to any customer through its current permitting authority within its Lake Livingston permit. The TRA can provide water as a direct diversion from Lake Livingston or as a downstream diversion through its bed & banks provision to any customer. The City of Houston through its Lake Livingston permits have established diversion points and diversion rates to convey water from the Trinity River basin into the San Jacinto River basin. As such, no additional water permits are required to enact the proposed contractual water agreement. Because no additional water permit actions will occur, specific regulatory environmental flow release requirements would not be triggered by this water management strategy. Due to perceived issues associated with this water management strategy, the City of Houston and TRA may desire to discuss this specific action with interested parties."

4) The consensus environmental planning criteria were developed for the SJRA-CLCND contractual transfer and incorporated into the plan as follows:

Task 5 Report, Appendix A, Technical Memorandum: San Jacinto River Authority/Chambers Liberty Counties Navigation District Contract Agreement, section **Issues and Considerations**, Replace the sentence "Downstream of the diversion point..." with the following:

"Based on diversion at the CWA pumping facility, environmental planning criteria may reduce the yield of the contractual transfer from 30,000 acre-feet per year to 28,270 acre-feet per year based on the computed environmental pass through flows contained in Exhibit 1."

Exhibit 1

Streamflow Zone	Zone 1	Zone 2	Zone 3
Actual Streamflow	> Median	< Median, > 25 th Percentile	< 25 th Percentile
Pass Through Target (cfs)	Median	25 th Percentile	7Q2
January	5,019	2,303	732
February	7,481	3,593	732
March	6,953	3,034	732
April	8,128	5,154	732
May	11,595	6,043	732
June	5,381	2,961	732
July	2,256	965	732
August	850	478	732
September	1,973	819	732
October	1,800	790	732
November	2,582	958	732
December	5,488	1,149	732

5) Key Issue F. *Determination that cost estimates developed in the plan were prepared in accordance with the provisions of the Contract.*

The cost estimates for management strategies for municipal county-other water user groups were revised per the TWDB's recommendation. Average system capital costs were determined for each major water provider in each county of interest, based on cost estimates for other municipal WUGs within that county. These average costs, and the resultant increases to the water rates, were applied to all municipal county-other WUGs.

The following corrections are made to the Task 5 Report, Appendix C. Also, Tables 11 and 12 are re-issued with corrections.

Page C-3. Under the heading Conveyance, Storage and Treatment Costs, replace the second sentence with "Facilities were not estimated for Non-Municipal WUGs."

Page C-5. Add the following paragraph before the sentence that begins "The town of Willis..."

"Exact geographic locations were not available for Municipal County-Other WUGs, which precluded the use of the above methods for facility estimating. For these WUGs, the average facility capital cost per acre-foot was calculated for each provider and county (see Table C-6). These average costs were then used to estimate the Municipal County-Other capital costs. While useful in the aggregate, these estimates should not be used in place of a detailed rate study for a particular utility district or small municipality. The SJRA – Montgomery County average cost was also applied to the Liberty County-Other category because there were no other WUGs associated with the TRA, the water service provider for Liberty County-Other."

Page C-5. Add the following sentence at the end of Annual Costs, item d: "For County-Other WUGs, average rates were calculated by provider and county (see Table C-6)."

Add Table C-6 (attached) after table C-5.

Table C-6: Summary of WUG’s Requiring Connections with Regional Provider

Provider & County	Total Acre-Feet	Conveyance & Storage Capital Cost	Treatment Capital Cost *	Total Capital Cost	Facility Annual Cost	Average Capital Cost per Acre-Foot	Facility Rate per Acre-Foot	Treatment Rate per Acre-Foot *	Total Rate per Acre-Foot **
BRA - Fort Bend / Brazoria	12,093	\$ 24,789,000	\$ 34,934,942	\$ 59,727,000	\$ 3,098,000	\$ 4,939	\$ 256	\$ 348	\$ 604
BRA - Waller	2,146	\$ 24,338,000	\$ 8,000,858	\$ 32,340,000	\$ 3,142,000	\$ 15,070	\$ 1,464	\$ 441	\$ 1,905
COH – Harris *	27,024	\$ 61,528,000	\$ -	\$ 61,528,000	\$ 7,645,000	\$ 2,277	\$ 283		\$ 283
GCWA - Braz/ Ft Bend/ Galv	910	\$ 2,236,000	\$ 4,153,800	\$ 6,390,000	\$ 279,000	\$ 7,022	\$ 307	\$ 290	\$ 596
SJRA – Harris	662	\$ 1,886,000	\$ 1,312,758	\$ 3,199,000	\$ 231,000	\$ 4,832	\$ 349	\$ 299	\$ 648
SJRA – Montgomery / Liberty	20,862	\$ 19,396,000	\$ 38,753,027	\$ 58,150,000	\$ 2,181,000	\$ 2,787	\$ 105	\$ 289	\$ 394

* The COH treated water rate from Table C-4 includes the cost of treatment facilities, and is used in Table 11.

** This value is added to the water rate from Table C-4 or the applicable management strategy to obtain the water rates entered in Table 11.

Key Issue G. Determination that all comments received by the RWPG on the initially prepared plans from the TWDB, other state and federal agencies, and the public within the specified comment period have been satisfactorily addressed.

Specific responses are made by comment number:

A.1. The following correction is made:

Task 1 Memorandum, Table 3, Cities with Populations Over 25,000, page 11. The 1996 population estimate for Conroe is 39,837, and the 1996 population estimate for Rosenberg is 26,747.

A.2. The following correction is made:

Task 1 Memorandum, Section 1.6, Existing Water Planning. In the last paragraph on page 31, replace the sentence “Smaller providers (fewer than 3,300 connections) must submit plans to the TNRCC by September 1, 2000.” with the sentence “Smaller providers (fewer than 3,300 connections) must prepare plans and have them on-file for TNRCC inspection by September 1, 2000. As of October 1, 2000, forty water conservation plans and 464 drought contingency plans had been submitted to the RHWPG.”

A.3. Some of the changes requested by the TWDB have not been performed. Appendix A of the Task 3 Report only lists "reliable" surface water rights. The comments on Table 4 are therefore addressed as follows:

Water right 8-4261 contains both stored water (Lakes Livingston and Wallisville) and run-of-river water. The firm yield of Lake Livingston is used for source ID 08400. The firm yield of the Wallisville Saltwater Barrier is used for source ID 08300. These values include the total yield from these sources under water rights 8-4261 and 8-4248. The reliable run-of-river portion of 8-4261 is shown with source ID 3460804261.

Water right 8-4279 contains both stored water (Lake Anahuac) and run-of-river supply. The run-of-river right is one of the most senior in the lower basin, and is the most reliable. The priority date for Lake Anahuac is not as senior and is less reliable. To more accurately portray this water right, it is combined into a single entry for source ID 3460404279. Footnote 9 was added to Table 4 for clarity.

Small water rights such as 10-3995 were determined to be unreliable during the drought of record, and were therefore not included in Table 4. The following additions to the Task 3 Report, Appendix A, pages A-2 to A-4 are made to clarify this issue:

In the section **Surface Water Sources**, delete the last sentence “There are several...”

In the section **Trinity River Run-of-River and Trinity River Basin**, add the following paragraph after Table 4-a:

“Eighteen additional water rights for irrigation and industry were identified in the Trinity River Basin, but were not included in *Table 4* because they were not reliable during the drought of record. These rights were all located on tributaries and not the main stem of the Trinity River. Recreational water rights that authorize impoundment only and not consumptive diversions were not considered in *Table 4*.”

In the section ***Brazos River Run-of-River***, add the following paragraph after *Table 4-b*:

“Eleven additional water rights for irrigation and industry were identified in the Brazos River Basin, but were not included in *Table 4* because they were not reliable during the drought of record, predominantly due to junior priority dates. Recreational water rights that authorize impoundment only and not consumptive diversions were not considered in *Table 4*.”

In the section ***San Jacinto River Run-of-River***, add the following paragraph after the only paragraph in the section:

“Fifty-eight additional water rights for irrigation and industry were identified in the San Jacinto River Basin, but were not included in *Table 4* because they were not reliable during the drought of record or they were saline water rights from the tidal portion of Buffalo Bayou. First, rights on the San Jacinto River with priority dates junior to the two major reservoirs were found to be unreliable, as were water rights located on small tributaries. Recreational water rights that authorize impoundment only and not consumptive diversions were not considered.”

In the section ***Neches-Trinity Coastal Basin***, add the following paragraph after the only paragraph in the section:

“Twenty-seven additional water rights for irrigation were identified in the Neches-Trinity Coastal Basin, but were not included in *Table 4* because they were not reliable during the drought of record. These rights were all located on small bayous and tributaries. Recreational water rights that authorize impoundment only and not consumptive diversions were not considered.”

In the section ***San Jacinto-Brazos Coastal Basin***, add the following paragraph after the only paragraph in the section:

“Forty-seven additional water rights for irrigation and industry were identified in the San Jacinto-Brazos Coastal Basin, but were not included because they were not reliable during the drought of record. These rights were all located on small bayous and tributaries. Recreational water rights that authorize impoundment only and not consumptive diversions were not considered.”

In the section ***Trinity-San Jacinto Coastal Basin***, add the following paragraph after the only paragraph in the section:

“Fourteen additional water rights for irrigation were identified in the Trinity-San Jacinto Coastal Basin, but were not included because they were not reliable during the drought of record. These rights were located on Cedar Bayou and its tributaries.

Recreational water rights that authorize impoundment only and not consumptive diversions were not considered.”

A.4. The values in Table 4-7 came from TWDB Table 9. The following text is added to clarify the report:

Task 4 Report, Table 4-7, Water Deficit for Manufacturing Water User Group, page 21. Add a star behind the entry “Brazoria” and add the following note immediately below the table:

“* Brazoria County deficits represent Brazos River Basin and Brazos-Colorado Coastal Basin supplies only. There is no shortage of manufacturing supply in the portion of the county in the San Jacinto-Brazos Coastal Basin. Economic impacts were estimated only for the basins with shortages.”

B.1. through B.7 The referenced entries in Table 3 were provided by the Brazos G Water Planning Group. We have confirmed that the original entries are correct.

B.8. The Baytown Area Water Authority serves customers in San Jacinto River Basin and the Trinity-San Jacinto River Basin. The projections for the Baytown Area Water Authority customer cities show demands increasing in the Trinity-San Jacinto Coastal Basin. This supply purchased from the City of Houston is therefore shown as meeting Coastal Basin demands in Tables 3 and 5.

B.9. The Region C Water Planning Group was contacted about the Table 3 data for Pumpco, Inc. They were not able to provide the additional data requested.

C.1. The following correction is made:

Task 3 Report, Appendix A, Table 4. For Source ID 3461004964, the Source Name “San Jac Run-of-River” was changed to “SJRA Div @ Lake Houston.” Footnote 12 was added: “12. This is a run-of-river water right. This San Jacinto River Authority water right is a unique situation where a run-of-river water right is withdrawn from Lake Houston without being credited against the firm yield of the lake.”

C.2. The TWDB staff states that the yield of the Brazos River Alluvium is 23,452 ac-ft/yr in decades 2000-2020, and declines to 18,800 ac-ft/yr in decades 2030-2050. This yield reduction only applies to the portion of the aquifer in Fort Bend County. A data search was conducted to validate this yield reduction, but no supporting information was found. Therefore, the estimated aquifer yield of 23,452 acre-feet/year was used in all decades.

D.1. The source identifier 32512 was meant to represent Gulf Coast Water Authority rights in the Brazos River, which are blended in the canal system and cannot be specifically allocated to customers. It has been replaced with source ID 12500, which has

been approved for use by TWDB staff. The other combined source IDs have been replaced in Table 5, as follows:

Task 3 Report, Appendix A, Table 4:

- Entries for Source ID 3461205168 and 3461205171 were replaced with a single combined entry, Source Name: GCWA Brazos Rights, Source ID: 12500. The supply of these two separate water rights are addressed in footnote 10.
- Footnotes 10 through 14 were deleted. Footnote 15 was renumbered as footnote 11.

Task 3 Report, Appendix A, Tables 5 and 5A:

- Entries with Source ID 32512, the Source ID was replaced with “12500” and the Source Name was replaced with “GCWA Brazos Rights.”
- Entries with Source ID 34T12 were replaced with separate entries for Source ID 3411201549 and 3461205492. Entry 34T12 represented the sum of the two separate entries.
- The single line entry for Source ID 34612 was replaced with two separate entries for Source ID 3461205325 and 3461205320, with the annual yields equal to 9,841 ac-ft and 10,159 ac-ft, respectively. Entry 34612 represented the sum of the two separate entries.

Task 3 Report, Appendix A, Table 6: For the two lines Gulf Coast Water Authority, Source ID 3461205168 and 3461205171, delete the second line and edit the remaining line as follows:

Source ID: 12500

Source Name: GCWA Brazos Rights

Water Supply, all decades: 178,182 acre-feet

D.2. The source ID 26011 was meant to represent Chocolate Bayou Water Company rights in the coastal basin. They have been corrected in Table 5 as follows:

Task 3 Report, Appendix A, Tables 5 and 5A: The single line entry for Source ID 26011 was replaced with two separate entries for Source ID 3461105357B and 3461105357C.

D.3. The source ID 34607 was meant to represent the sum of small irrigation water rights in the coastal basin. They have been corrected in Table 5 as follows:

Task 3 Report, Appendix A, Tables 5 and 5A: The single line entry for Source ID 34607 was replaced with three separate entries for Source ID 3460704287, 3460704293 and 3460704304B.

D.4. The footnote corresponding to superscript 8 was erroneously omitted from the printed version of Table 5. It is included in the re-issued version.

E. The mistyped entry in Table 6, 3410805271B, has been corrected in the reissued table.

F. The recipient basins for BRA sources were obtained from the Brazos G Water Planning Group. Tables 8 and 8A are corrected as follows:

Task 4 Report, Appendix A, Table 8 – Comparison of Water Demands with Current Water Supplies by Major Providers of Municipal and Manufacturing Water. For the first 11 entries, MWP Name Brazos River Authority, the Recipient Basin is 12.

Task 4 Report, Appendix A, Table 8A – Comparison of Water Demands with Current Water Supplies by Major Providers of Municipal and Manufacturing Water. For the first 12 entries, MWP Name Brazos River Authority, the Recipient Basin is 12.

G.1. and G.2. Table 11 was corrected as follows:

Task 5 Report, Appendix C, Table 11:

- Source ID “32512” is replaced with “12500” to match the Source ID used in the earlier tables.
- Entries with the Source ID 3461004964, Source Name “San Jacinto ROR” is replaced with “SJRA Div @ Lake Houston” to match the Source Name used in the earlier tables.

H.1 and H.2. Table 12 was corrected as follows:

Task 5 Report, Appendix C, Table 12:

- Source ID “32512” is replaced with “12500” to match the Source ID used in the earlier tables.
- Entries with the Source ID 3461004964, Source Name “San Jacinto ROR” is replaced with “SJRA Div @ Lake Houston” to match the Source Name used in the earlier tables.

H.3. The mistyped entry in Table 12 was corrected, as follows:

Task 5 Report, Appendix C, Table 12, Page 12 of 15, 6th entry (Manufacturing, WUG Num 081001101). Change the values for Supply 2040 and Supply 2050 from 29,470 to 29,740.

While making the above corrections to Tables 11 and 12, the following required correction was identified and made:

Task 5 Report, Appendix C, Table 11 - Potentially Feasible Water Management Strategies, and Table 12 - Recommended Water Management Strategies by City and Category. Entries for Manufacturing in Brazoria County, Basin No. 12. The supply values are misallocated between strategies for the following entries. The corrected values are listed below:

Strategy Type	Source Name	Supply 2010	Supply 2020	Supply 2030	Supply 2040	Supply 2050
4e	San Jacinto-Brazos Coastal Basin	9,000	10,000	15,000	17,000	18,300
4e	BRA/COE System	5,289	11,000	18,839	16,000	14,000
4j1	Allens Creek Resv.	0	6,000	6,000	6,000	6,700
4j3	Little River Reservoir	0	0	0	22,694	44,418

The TWDB Comments on the Initially Prepared Plan and on the Final Plan are added to the Task 7 Report, as follows:

Task 7 Report, Add the following entry to the Table of Contents:
 Comments received from the Texas Water Development Board..... 126

Task 7 Report, Add the attached section, “7.7 Comments Received from the Texas Water Development Board” to the report following page 125.

Key Issue H. *Determination that there is consistency between the selected water management strategies contained in the Regional Water Plan and the supporting electronic data submitted by the regions..*

No comments were received on this topic.

TABLE 1:
Population by City and Rural County

WUGName	CountyName	BasinName	WUGNum	RWPG	Seq#	City#	County#	Basin#	pop1996	pop2000	pop2010	pop2020	pop2030	pop2040	pop2050

Notes:

- The Trinity Run-of-River, Lake Livingston, Wallisville Salt Water Barrier, Lake Conroe, Lewis Creek, Trinity Run-of-River - Old River Tributary Supply and San Jacinto Run-of-River data are from Trans-Texas Water Program Phase I Report 1994.
- The Lake Livingston and Wallisville Salt Water Barrier supplies represent the system yield for Livingston/Wallisville system.
- The Brazos Run-of-River supplies came from the Brazos River availability model prepared by HDR, Inc., engineering consultants for Region G.
- The BRA/COE System supplies were provided by the Brazos River Authority. BRA owns Alan Henry, Possum Kingdom, Granbury, and Limestone. COE owns the remaining reservoirs in the BRA/COE system.
- The Coastal Basin supplies came from the Brown & Root availability model.
- Supply estimates based on results from groundwater flow model developed by Harris Galveston Coastal Subsidence District for area including Fort Bend County and on aquifer response to pumpage.
- Supply estimates based on aquifer response to pumpage and estimates of recharge for Montgomery County area.
- The estimated supply is not entirely available to Region H. Please see table below.
- This supply represents 88,820 ac-ft/yr Trinity ROR and 14,326 ac-ft/yr from Turtle Bayou/Lake Anahuac/Trinity Bay.
- Source ID 12500 represents the GCWA Brazos ROR water rights. It consists of 3461205168 (99,932 ac-ft/yr) and 3461205171 (78,250 ac-ft/yr).
- These supplies are assumed to be drought of record reliable because there is no information to establish reliability.
- This is a run-of-river water right. The construction of Lake Houston forced the relocation of the diversion point.

Total Sources Available to Region H	3,687,538	3,611,244	3,478,888	3,459,902	3,459,905	3,460,308

Note: 1) Environmental needs may be met by sources other than those listed in Table 5.												
2) Sources of inflows to the bay system include gaged and ungaged inflows and gaged and ungaged return flows from all contributing basins. Table 5 does not represent all contributing sources of bay inflows.												
3) Beginning in 2000 infrastructure will limit groundwater supply in Walker County-Other.												
4) Beginning in 2020 infrastructure will limit groundwater supply in Brookshire in Waller County.												
5) Beginning in 2030 infrastructure will limit groundwater supply in the City of Cleveland in Liberty County, the City of Liberty in Liberty County, Panorama Village in Montgomery County, Willis in Montgomery County, Hempstead in Waller County, and Prairie View in Waller County.												
6) Beginning in 2040 infrastructure will limit groundwater supply in the City of Alvin in Brazoria County.												
7) Beginning in 2010 raw water system will limit supply in the City of Pearland, Brazoria County.												
8) The City of Houston is a major water provider for Region H and treats Lake Conroe, Lake Houston, and Lake Livingston as a system. The unallocated water from these three reservoirs is excess water that the City of Houston has available to sell.

- Note: 1) Environmental needs may be met by sources other than those listed in Table 5.
 2) Sources of inflows to the bay system include gaged and ungaged inflows and gaged and ungaged return flows from all contributing basins. Table 5 does not represent all contributing sources of bay inflows.
 3) Beginning in 2000 infrastructure will limit groundwater supply in Walker County-Other.
 4) Beginning in 2020 infrastructure will limit groundwater supply in Brookshire in Waller County.
 5) Beginning in 2030 infrastructure will limit groundwater supply in the City of Cleveland in Liberty County, the City of Liberty in Liberty County, Panorama Village in Montgomery County, Willis in Montgomery County, Hempstead in Waller County, and Prairie View in Waller County.
 6) Beginning in 2040 infrastructure will limit groundwater supply in the City of Alvin in Brazoria County.
 7) Beginning in 2010 raw water system will limit supply in the City of Pearland, Brazoria County.
 8) The City of Houston is a major water provider for Region H and treats Lake Conroe, Lake Houston, and Lake Livingston as a system. The unallocated water from these three reservoirs is excess water that the City of Houston has available to sell.

Table 6 - Current Water Supplies Available to the RWPG by Major Provider of Municipal and Manufacturing Water

Notes:

¹Represents portion of Livingston/Wallisville System yield.

²A 16,000 ac-ft/year supply was allocated from Lake Livingston to Region C, based on the information received from Freese and Nichols, Inc.

³A 6,721 ac-ft/year supply was allocated from Lake Livingston to Region G (City of Huntsville contract with Tenaska).
